Keywords : Syntheses, Heterocyclyl-5,6-benzocoumarins.

Sulpha drugs are well recognized for their various physiological activities, ${ }^{1,2}$ likewise, many pyrimidine derivatives are used as therapeutic agents, ${ }^{3-8} 5,6$-Benzocoumarin derivatives show antimicrobial, ${ }^{9}$ antiinflammatory ${ }^{10}$ and anticancer ${ }^{11}$ activities. The present work describes the syntheses of some new heterocyclyl-benzocoumarins, starting from 3-acetyl-5,6-benzocoumarin (1), which are depicted in Scheme 1 and 2.

3-(2'-Formyl-1'-chlorovinyl)-5,6-benzocoumarin (2) was prepared from 3-acetyl-5,6-benzocoumarin (1) and DMF$\mathrm{POCl}_{3}$, according to literature procedure. ${ }^{12}$ Treatment of
compound 2 with thiourea, 3-amino-1,2,4-triazole, 2aminobenzimidazole and 3-amino-5-phenylpyrazole in dimethyl formamide gave the corresponding 3-(2'-mercapto or 1",2",4-triazolo[ $\left.1^{\prime}, 2^{\prime}-\mathrm{b}\right]$ or benzimidazole[1',2'-b] or 5"phenylpyrazolo[ $\left.1^{\prime}, 2^{\prime}-\mathrm{b}\right]$ pyrimidin- 6 '-yl)-5,6-benzocoumarins (3-6).
It has been reported recently ${ }^{13-16}$ that 3-(2'-formyl-1'-chlorovinyl)-5,6-benzocoumarin (2) reacts with chloroacetic acid in the presence of $\mathrm{Ac}_{2} \mathrm{O}-\mathrm{AcONa}$ to afford the corresponding 3-(3'-chloro-2'-oxo-2'H-pyran-6'-yl)-5,6-benzocoumarin (7).

Scheme 2

Treatment of compound 7 with sodium azide in acetic acid gave 3-(1",2",3"-triazolo[3',4'-b]pyran-6'-yl]-5,6-benzocoumarin (8). Also, compound 7 reacted with thiourea, hydrazine monosulphate and aromatic amines (namely aniline and $p$ toludine) in ethanol to give 3-(2"-thioxo-2"H-imidazolo-[3',4'-b]pyran-6'-yl]-5,6-benzocoumarin (9) and 3-(sub-stituent-2'-oxo-2H'-pyran-6'-yl)-5,6-benzocoumarins (10a-c).

## Experimental Section

Melting points were determined on a Boetium Hostage apparatus and uncorreted. IR spectra were recorded on a Perkin-Elmer FTIR 1725 spectrometer. The H-NMR Sepctra were recorded on a General Electric QE 300, and chemical shifts were given with respect to TMS. Mass spectra were obtained on a VG Autspec CEI and $\mathrm{FAB}^{+}$and a Hewlett Packard MS-Engine thermospray. Microanalyses were conducted using an elemental analyzer 116.
